C12-78 - Accelerated Implementation

Project Narrative

Boy and Swift Lakes are connected lakes on the Boy River, the major tributary stream to Leech Lake. In cooperation with funding from the Boy/Swift Lake Association and the Initiative Foundation Healthy Lakes and Rivers program, this project will result in Subsurface Treatment System (SSTS) compliance inspections on up to 290 properties on Boy Lake and 69 on Swift Lake. The project will also result in an SSTS record review and inventory of all properties on the two lakes.

The Lake Association will provide volunteer coordination assistance for the project. A trained and certified SSTS professional inspector will be retained to conduct the inspections. Cass County Environmental Services Department provides logistical support, oversight and fiscal management of the project. Systems that fail to meet standards will be brought into compliance using procedures available in rule and ordinance.

Proposed Outcomes:

Septic Compliance inspections on up to 290 properties on Boy Lake and 69 properties on Swift lake

Actual Outcomes:

Project in Progress
